

You are invited to be here when the lights go on.

Seeing is believing. And the people at Porsche/Audi would like you to be among the first in America to believe in a whole new concept in international automotive engineering.

Take the Porsche 911. The car which has made racing the name of its game. This year's Porsche more than lives up to what has become a living legend of excellence.

Speaking of legends, to see one in the making don't miss the all-new Porsche 914. That's the car with the engine in the middle. And don't be surprised if you see two 914s. One comes with a 4-cylinder engine. And the other with a 6-cylinder engine.

The introduction of the Audi in America will be another automotive debut of tremendous significance. The Audi has been famous in Europe for many years for its advanced engineering, and is considered to be one of the safest cars in its class.

Look at it this way. If you really want to see something new, and something newer, and the newest in automotive engineering, be here when the lights go on.
